FAULKNER HOSPITAL PROGRAM

October 6, 1934

The Staff and Associates of the Faulkner Hospital have made considerable effort this year to provide operations, and especially Dry Clinics, along the lines of Bone and Joint work, especially of the Traumatic and Reconstructional type, that shall be worth a visit by our friends to the Wednesday Clinic.

This Clinic, in fact, represents something more than the material that would naturally come to the Faulkner Hospital, excellent though that has grown to be, and the men presenting and discussing are people of sufficient standing to justify bringing this Clinic to your special attention.
